### **DETAILED ACTION**

### Petition to Correct Inventorship

The petition to correct inventorship under 37 CFR 1.48(a) has been approved.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 6-8, 10-12, 14-17, 21-22 and 25-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shadduck (US 6,503,251) in view of Ballintyn et al. (US 5,584,836).

Shadduck discloses a fixation screw having a shank with a constant minor diameter, a distal portion with a minor diameter that decreases in a proximal-to-distal direction, opposed first and second helical threads, and a constant thread depth (Figs. 6 and 7, col. 4, lines 21-67, col. 5, lines 34-59 and col. 8, lines 19-40).

Shadduck discloses all elements of the claimed invention except for a separate head.

Ballintyn et al. teach that a screw made of a bioabsorbable material is provided with a head having a recess for receiving an insertion tool to reduce shear stress and limit shear failure to the vicinity of the head of the screw (col. 1, lines 40-54).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided the Shadduck screw with a head, as taught by Ballintyn et al., to limit shear failure to only the head of the screw.

Application/Control Number: 10/708,881

Art Unit: 3733

Claims 3-5, 9, 13, 18-20 and 23-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shadduck (US 6,503,251) and Ballintyn et al. (US 5,584,836), further in view of Schlapfer et al. (US 6,585,740).

The combination of Shadduck and Ballintyn et al. discloses all elements of the claimed invention except for the claimed ranges of lengths and the pitch.

Schlapfer et al. teach optimizing the pitch and length of a screw for improved biological anchoring (col. 4, lines 7-33 and col.5, lines 43-56).

Accordingly it would have been obvious to one of ordinary skill in the art at the time the invention was made to have optimized the pitch and length of the Shadduck screw, as taught by Schlapfer et al., for improved biological anchoring.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided a pitch of 6 mm, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided lengths in a range of 20 mm to 100 mm, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

# Response to Arguments

Applicants' arguments submitted under "REMARKS" in the response filed on May 25, 2007 have been fully considered.

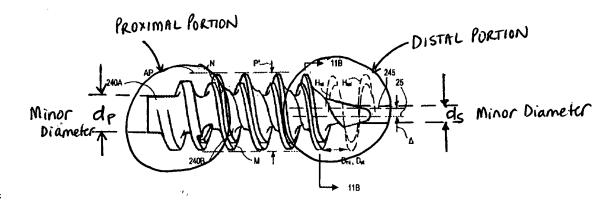

Applicants' arguments with respect to the rejections of claims 1-2, 6-8, 10-12, 14-17, 21-22 and 25-30 as being unpatentable over Shadduck in view of Ballintyn et al. are not persuasive for the following reason.

Shadduck discloses a shank having a proximal portion with a constant minor diameter; a distal portion with a minor diameter that decreases in a proximal-to-distal direction; and opposed first and second helical threads that extend around at least a

Application/Control Number: 10/708,881

Art Unit: 3733

portion of the proximal and distal portions of the shank; wherein the thread depth remains constant along the length of the shank. See marked up Fig. 7 from Shadduck below.

As illustrated above, at least partial revolutions of the helical threads extend around at least a portion of the proximal and distal portions.

Regarding claim 16, Shadduck discloses that the second axis could be parallel to but laterally offset from the first axis and meets the claim limitation of "approximately 180 degrees from one another."

Regarding claim 30, Applicants' arguments are not directed to claim limitations. As illustrated above, the shank of the Shadduck bone screw has a proximal portion with a constant minor diameter and a distal portion with a minor diameter that decreases in a proximal-to-distal direction.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 3733

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anu Ramana whose telephone number is (571) 272-4718. The examiner can normally be reached Monday through Friday between 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached at (571) 272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
